Art Unit: 1621

The following is an examiner's statement of reasons for allowance: US patent 4,198,535 to Takahata teaches a process for dimerization of alpha-alkyl styrene in the presence of a silica-alumina catalyst. However, the prior art of record neither teaches nor suggests the dimerization of alpha substituted styrene in the presence of a perfluorinated ion-exchange polymer with pendant sulfonic and/or carboxylic acid entrapped within and highly dispersed throughout a network of metal oxide, wherein the size of the pores in the microcomposite is about 0.5 nm to 75 nm.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jafar Parsa whose telephone number is (571)272-0643. The examiner can normally be reached on 8 a.m.-4:30 p.m. (M-F).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Johann Richter can be reached on (571)272-0646. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/680,816
